DETAILED ACTION

Remarks

This Office Action is responsive to Applicant's amendment filed February 12, 2002.

Claims 2, 8 and 14 have been canceled. Claims 1, 3-7, 9-13 and 15-18 remain pending.

The rejection of claims 1, 3, 5-7, 9, 11-13, 16 under 35 U.S.C. 102(b) based on Megahed et al. has been withdrawn.

The rejection of claims 1, 3, 4, 6, 7, 9, 10, 12, 13, 16 and 17 under 35 U.S.C. 102(b) based on Terasaka et al. has been withdrawn.

The rejection of claims 1, 6, 7, 12 and 13 under 35 U.S.C. 102(b) based on Inoue et al. has been withdrawn.

This Office Action presents a new ground of rejection and is therefore made **NON-FINAL**.

Claim Objections

Claims 1 and 7 (as amended) are objected to because of the following informalities:

In claim 1 at line 4, "monosaccaride" requires changing to --monosaccharide--.

Claim 7 at line 5 recites the same limitation to claim 4 above and is thus objected to under the same grounds.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 7, 13 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Hayashi et al. (Japanese Patent 9-120817)

For purposes of detailed discussion, the examiner relies on a machine translation of the above-cited document as obtained from the JPO website.

Hayashi teaches a nickel hydroxide material for an electrode of an alkaline electrochemical cell along with a binder, i.e. stabilizing agent comprising a monosaccharide such as sugar. (Abstract) This sugar is further disclosed as grape sugar or fructose. (paragraph [0010]) The disclosed stabilizing agent is considered a binder material since binders have the function of mechanically or physically stabilizing its constituents. Further, insofar as Applicant may be his or her own lexicographer, the monosaccharide is specifically disclosed to be part of the electrode active material composition. (paragraph [0012]) The examiner notes that the scope of the present claims, in reciting the open-ended transitional phrase “comprising”, allows other active materials to be present in the electrode composition, such as cobalt hydroxide, in addition to the nickel hydroxide material. The nickel hydroxide, however, is notably present at significantly larger amounts, as exemplified in a relative ratio of 100 parts nickel hydroxide to 5 parts cobalt hydroxide. (paragraph [0026]) The negative electrode is a hydrogen-storing metal alloy. (paragraph [0027], applies to claim 15)

Claim Rejections - 35 USC § 103

Claims 6 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hayashi et al. as applied to claims 1, 7, 13 and 15 above.

The teachings of Hayashi are discussed above.

Hayashi does not explicitly teach the binder to be present within the range of 0.1 to 2.0 weight percent of the active material composition. However, absent of unexpected results, the amount of binder or stabilizing agent is considered an optimizable parameter for result-effective variables. The amount of binder is considered result-effective as its amount directly correlates with increased stability in adhesion, dispersion or cohesiveness within the electrode structure. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980)

Allowable Subject Matter

Claims 3-5, 9-11 and 16-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record and to the examiner's knowledge do not teach or render obvious at least to the skilled artisan the instant invention regarding an alkaline electrochemical cell employing a nickel hydroxide active material and a binder comprising pectin or molasses.
